Processing of Advanced Materials

Editors

J A McGeough, University of Edinburgh, UK
North American Editor: M Datta, IBM Corporation, Yorktown Heights, USA

Aims and Scope

Processing of Advanced Materials is a new refereed quarterly which covers all aspects of processing including recently developed methods for forming,joining, machining and surface modification when these techniques are applied to the treatment of advanced materials (composites, ceramics, plastics, electronic materials and new alloys). The Journal deals with the fundamentals of processing methods, analytical and numerical models, development of experimental techniques and new industrial practices employed in the manufacturing of advanced materials into usable products. It encourages papers on the science and engineering of methods such as spray forming and electroforming, and on the new joining technologies. Advanced techniques such as laser, electron beam and diffusion bonding, welding and cladding are included, as are advanced machining processes such as electron beam, electrodischarge (EDM), laser, electrochemical (ECM), ultrasonic, plasma arc, water and abrasive jet and photochemical methods. In addition, the Journal covers the new etching processes, such as plasma/reactive ion, as well as wet methods and thin film processing, and techniques for modification of surfaces of materials, such as ion beam implantation, electrostatic painting and coating and laser hardening.

Processing of Advanced Materials also publishes review papers on important topics.

A Selection of Papers

Self-induced repair (SIR): a new electrochemical defect repair and circuit modification technique for microelectronic systems. C J Chen and R J von Gutfeld, USA. Surface electrical properties of Ni-implanted sapphire. L Shipu, F Donghui, X Ning, S Zhhenya and C Xaioming, China. Investigation into machining of GFRP composites. M Satheesh, V K Jain and P Kumar, India. Impact resistance of a new multilayer metal matrix complex composite. A J Vasquez and J J de Damborenea, Spain. Experiments to allow the interpretation of a computer-based thermal model of the solder paste reflow process. P P Conway, D J Williams and D C Whalley, UK. Machining of new materials: a review. W Konig, L Cronjager, G Spur, H K Tonshoff, M Vigneau and W J Zdeblick, Germany.
